

TimeVision® 2.1

See the evolution of your building site in pictures...

- Creation of an accelerated film (time-lapse)
- Superior quality images (up to 2 million pixels)
- No client software installation required for visualization
- Link and visualization on your Internet site*
- Monitor your building site progress
- Data saved on a secured server
- "Plug and Play" solution

Monitor the evolution of your building site, day after day, via a high-resolution camera.

Observe "realtime" how work is progressing on your Internet site with **TimeVision***. When the work is finished our engineers will create an accelerated film showing the whole construction period.

This new technology is easy to install, convincing and cheap; it adds value to your work and offers your clients a complementary service.

TimeVision is a novel concept and an ideal visual tool to promote your architectural projects: Commercial or industrial buildings, office or apartment blocks, villas, schools etc.....

* intervention of your webmaster required

How does it work ?

Install the camera where required and connect to the modem (Internet).

Once installed, the server hosted in STVS offices retrieves the images from the camera and stores them on your allocated disk space.

Once the site is finished, our engineers will produce the film.
